

aDMe Assignment

September 2022

This doc consists of an assignment question and the instructions to do and submit it.

How to Submit

Once done :

- Create a GitHub repository (don't use **aDMe** in the repo name or anywhere in repo).
- Share the link with us
- This repository should contain a readme file describing the method you have used to solve the problem.
- Time taken to complete this assignment.

Let us know if you have any doubts regarding the assignment.

Note : these assignments are designed purely for the evaluations purpose and any part of your submission won't be used in the actual product we are working on.

Assignment

Create a web application using create-react-app:

1. Create a User card grid layout having navbar showing any brand name
2. Add a button in the navbar saying 'Get Users', which makes an API call to get the user data
3. Use <https://reqres.in/api/users?page=1> to get the data
4. Show a loader while the API fetches the data.
5. Bonus points for using custom CSS/SASS/styled-components.
6. Bonus points for clean code.

You can design your own UI for this, make it simple.
